

B. TECH. ELECTRICAL ENGINEERING

SEMESTER 3 rd		Contact Hrs.			Marks			Credits
Subject Code	Subject Name	L	T	P	Int.	Ext.	Total	
BMAT0- 301	Mathematics-III	3	1	0	40	60	100	4
BELE1-301	Transformers	3	1	0	40	60	100	4
BELE1-302	Network Analysis and Synthesis	3	1	0	40	60	100	4
BELE1-303	Electronic Devices & Circuits	3	1	0	40	60	100	4
BELE1-304	Electrical Measurement & Instrumentation	3	1	0	40	60	100	4
BELE1-305	Measurement & Instrumentation Lab.	0	0	2	60	40	100	1
BELE1-306	Electronic Devices & Circuit Lab.	0	0	2	60	40	100	1
BELE1-307	Training#	0	0	4	60	40	100	2
BHUM0-F91	Soft Skills-I	0	0	2	60	40	100	1
Total		15	5	10	440	460	900	25

#Workshop training will be imparted in the institution at the end of 2nd semester for four-week duration

(Minimum 36 hrs. per week) industrial tour will also from the part of this training.

SEMESTER 4 th		Contact Hrs.			Marks			Credits
Subject Code	Subject Name	L	T	P	Int.	Ext.	Total	
BELE1- 408	DC Machines	3	1	0	40	60	100	4
BELE1- 409	Digital Electronics	3	1	0	40	60	100	4
BELE1- 410	Electrical Engineering Materials	3	1	0	40	60	100	4
BELE1- 411	Linear Control System	3	1	0	40	60	100	4
BELE1- 412	Electromagnetic Field Theory	3	1	0	40	60	100	4
BELE1- 413	Electrical Machine - I Lab.	0	0	2	60	40	100	1
BELE1-414	Control System Lab.	0	0	2	60	40	100	1
BELE1-415	Digital Electronics Lab.	0	0	2	60	40	100	1
BHUM0- F92	Soft Skills - II	0	0	2	60	40	100	1
Total		15	5	8	440	460	900	24

After 4th semester, student will go for 6 Weeks Institutional / Industrial Training in which he/she should cover complete knowledge of at least one of the following software:

MATLAB/LabVIEW/C/C++/Automation/AutoCAD (Electrical)/Data Analysis using Excel.

**MRSPTU B. TECH. ELECTRICAL ENGINEERING SYLLABUS 2016 BATCH
ONWARDS UPDATED ON 16.2.2018**

SEMESTER 5 th		Contact Hrs.			Marks			Credits
Subject Code	Subject Name	L	T	P	Int.	Ext.	Total	
BELE1- 516	Asynchronous Machines	3	1	0	40	60	100	4
BELE1- 517	Power Electronics & Drives	3	1	0	40	60	100	4

MATHEMATICS-III

Subject Code: BMAT0-F91

L T P C
3 1 0 4

Duration: 45 Hrs.

UNIT-I (13 Hrs.)

Fourier Series: Periodic function, Fourier Series, Dirichlet's conditions, Fourier series for even and odd functions, Change of interval, Half range Fourier series, Other forms of Fourier series.

Fourier Transforms: Dirichlet's conditions, Fourier integral formula (without proof), Fourier transform, Inverse Theorem for Fourier transform, Fourier sine and cosine transforms and their inversion formulae. Properties of Fourier transform, Convolution theorem of Fourier transforms, Parseval's identity.

UNIT-II (10 Hrs.)

Laplace Transforms: Laplace transforms of various standard functions (Exponential, Algebraic, Sine, Cosine), Properties of Laplace transforms, inverse Laplace transforms, transform of derivatives and integrals, Laplace transform of unit step function, impulse function,

Application of Laplace Transforms: Solution of ordinary linear differential equations with constant coefficients, and simultaneous differential equations.

UNIT-III (12 Hrs.)

Partial Differential Equations: Formation of partial differential equations, Linear partial differential equations, homogeneous partial differential equations with constant coefficients. Classification of partial differential equation.

Applications of PDEs: Wave equation and Heat conduction equation in one dimension. Two dimensional Laplace equation in Cartesian Coordinates, solution by the method of separation of variables.

UNIT-IV (10 Hrs.)

Functions of Complex Variable: Limits, continuity and derivative of the function of complex variable, Analytic function, Cauchy-Riemann equations, conjugate functions, harmonic functions; Conformal Mapping: Definition, standard transformations, translation, rotation, inversion, bilinear. Complex Integration: Line integrals in the complex plane, Cauchy's theorem, Cauchy's integral formula and derivatives of analytic function. Taylor's and Laurent's expansions (without proofs), singular points, poles, residue, Integration of function of complex variables using the method of residues(Integration Of type

$$\int_0^{2\pi} F(\cos\theta, \sin\theta)d\theta, \int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$$

Recommended Books

1. E. Kreyszing, 'Advanced Engineering Mathematics', 8th Edn., John Wiley, New Delhi.
2. B.S. Grewal, 'Higher Engineering Mathematics', Khanna Publishers, New Delhi.
3. Ian N. Sneedon, 'Elements of Partial Differential Equations', McGraw- Hill, Singapore, 1957.
4. Peter. V. O'Nil, 'Advanced Engineering Mathematics', Wadsworth Publishing Company.
5. H.C. Taneja, 'Engineering Mathematics', Volume-I & II, I.K. Publisher.

TRANSFORMERS

Subject Code: BELE1-301

L T P C
3 1 0 4

Duration: 45 Hrs.

Course Objectives

1. To aware the students about the basics of Transformer.

2. To provide basic concepts of different types of transformer connections and their applications.
3. To impart knowledge of single phase transformer, auto transformer and three phase transformer.
4. To impart knowledge about analysis of different transformer connections.

Course Outcomes

1. Students will be having skills to analyse transformer connections.
2. Knowledge of different types of transformer operations and applications.

UNIT-I (12 Hrs.)

Single Phase Transformer: Construction, working principle of operation, E.M.F. equation, phasor diagram under loaded and unloaded condition, rating of transformers, losses in transformer, transformer testing, open and short circuit tests, back to back test, voltage regulation and efficiency, condition for maximum efficiency, equivalent circuit, ideal Transformer, parallel operation of single phase transformers, applications of transformers.

UNIT-II (11 Hrs.)

Auto-Transformer: Construction, working principle of operation, phasor diagram, saving of conductor material, comparison of auto transformer and two winding transformer, advantages, disadvantages and applications, equivalent circuit.

UNIT-III (12 Hrs.)

Three Phase Transformer: Three winding transformer, construction of three phase transformer, three phase transformer connections: Star-star connection, delta-delta connection, delta-star connection, star-delta connection, phasor groups, three phase to two phase and six phase conversion, scott connection- three phase to two phase conversion, phase shifting from primary to secondary windings, Parallel operations of three phase transformers, harmonics and excitation phenomenon, inrush current phenomenon.

UNIT-IV (10 Hrs.)

Transformer Materials: Different types of insulating materials for transformer core, winding, insulation, need for bushings, various cooling techniques, effect of temperature on the performance of transformer.

Recommended Books

1. P.S. Bhimbra, 'Electrical Machinery', Khanna Publishers, Delhi, 2004
2. A.E. Fitzgerald, C. Kingsley and S.D. Umans, 'Electric Machinery', TMH, 2002.
3. A.S. Langsdorf, 'Theory of AC Machinery', Tata McGraw Hill, 1955.
4. Ashfaq Hussian, 'Electrical Machines', Dhanpat Rai and Company, 2002.
5. S.J. Chapman, 'Electrical Machinery Fundamentals', McGraw Hill, New York, 1991.

NETWORK ANALYSIS AND SYNTHESIS

Subject Code: BELE1-302

**L T P C
3 1 0 4**

Duration: 45 Hrs.

Course Objectives

1. To aware the students about the basics of networks.
2. To provide them basic concepts of different types of network theorems and their applications.
3. To impart knowledge about different circuits, analysing and synthesizing the circuits.

Course Outcomes

1. Students will be having skills to design, analyse and synthesize the circuits.
2. Knowledge of mathematical forms such as Laplace transforms and designing of filters circuits.

UNIT-I (10 Hrs.)

Circuits Concepts: Independent and dependent sources, Standard test signals: Step, ramp, impulse, and doublet. Mesh and nodal analysis. Network Theorems: Superposition, Thevenin's, Norton's, Maximum Power Transfer, Millman's, Tellegen's and Reciprocity.

UNIT-II (11 Hrs.)

Time and Frequency Domain Analysis: Representation of basic circuits in terms of generalized frequency and their response, Laplace transform, transient and steady response, transfer function, poles and zeros, pole zero diagram, time domain behaviors from poles and zeros, Convolution Theorem.

UNIT-III (12 Hrs.)

Network Synthesis: Network functions, Impedance and admittance function, Transfer functions. Network function for two port network, Sinusoidal network in terms of poles and zeros, Real liability condition for impedance synthesis of RL, LC and RC circuits, network synthesis techniques for 2-terminal network, foster and cauer forms.

UNIT-IV (12 Hrs.)

Filters Synthesis: Classification of filters, characteristics impedance and propagation constant of pure reactive network, Ladder network, T-section, π -section, terminating half section, pass bands and stop bands, Design of Constant-K, m-derived filters, Composite filters.

Recommended Books

1. Bird John, 'Electrical Circuit Theory and Technology', Newnes, **2003**.
2. Abhijit Chakraborty, 'Circuit Theory', Dhanpat Rai, **2001**.
3. D. Roy Chaudhury, 'Networks and Synthesis', New Age International.
4. T.S.K. Vlyer, 'Circuit Theory', Tata McGraw Hill, **2006**.
5. Mohan, Sudhakar Sham, 'Circuits and Networks Analysis and Synthesis', TMH, **2005**.
6. Van Valkenberg, 'Network Analysis and Synthesis', PHI Course, **2009**.

ELECTRONICS DEVICES AND CIRCUITS

Subject Code: BELE1-303

L T P C
3 1 0 4

Duration: 45 Hrs.

Course Objectives

1. To aware the students about basic electronic components.
2. To update the knowledge about amplification circuits to amplify the signal.
3. Various types of circuits to generate signals.
4. How electronic components are specified and selected for industrial applications.

Course Outcomes

1. The students could have skills about the basic electronic circuits, their operational characteristics and their applications.
2. Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

UNIT-I (10 Hrs.)

Introduction: Introduction to semiconductors theory, P type and N-Type semiconductors, different types of diodes, Drift current, diffusion current. Rectifiers.

UNIT-II (11 Hrs.)

Bipolar Junction Transistor: Working action of NPN and PNP. CE, CB and CC configurations, Current components, Concept of D.C. and A.C. load line and operating point, Q point selection, bias stability, various biasing circuits- fixed bias, collector to base bias, emitter bias, voltage divider, Stability factors.

UNIT-III (12 Hrs.)

Power Amplifiers: Classifications according to mode of operation and driving output, Class A direct coupled with resistive load, operation of class- B power amplifier, Push-Pull Amplifiers, Concept of feedback in amplifiers: Positive and negative feedback, effect of negative feedback.

Oscillators: Principle of operation of different oscillator circuits-RC Phase shift, Wien Bridge, Hartley Bridge, Colpits and Crystal oscillators.

UNIT-IV (12 Hrs.)

Field Effect Transistors: FET construction and working, P-channel and N-channel JFETs. Comparison with BJT, Characteristics of JFET, JFET parameters- AC drain resistance, trans-conductance, amplification factor, dc drain resistance. Construction, working and characteristics of MOSFET. Comparison of BJT, JFET and MOSFET.

Recommended Books

1. Boylestad and Nashelsky, 'Electronic Devices and Circuits', Prentice Hall, 2010.
2. Millman and Halkias, 'Integrated Electronics', McGraw Hill, 2001.
3. Malvino, 'Electronic Principles', McGraw Hill, 2007.
4. V.K. Mehta, 'Principles of Electronics', S. Chand, 2006.
5. Donald L. Shilling and Charles Belowl, 'Electronic Circuits', TMH, 2009.

ELECTRICAL MEASUREMENT & INSTRUMENTATION

Subject Code: BELE1-304

L T P C

Duration: 45 Hrs.

3 1 0 4

Course Objectives

1. To aware the students about the basics of measurements and instrumentation systems.
2. To impart knowledge about different instruments for electrical measurements.
3. To provide them basic concepts of different types of sensors and transducers.

Course Outcomes

1. The students will be having skills to design, analyse and instruments.
2. To gain the skill knowledge of bridges and CRO operations.

UNIT-I (12 Hrs.)

Measuring Instruments: Introduction to measuring techniques, necessity of measurements, block diagram of measurement system, types of instruments, classification of standards, fundamental and derived units. Instrument characteristics; accuracy, precision, repeatability and sensitivity. Different types of errors in measurement. Principle of operation and constructional features; D'Arsonval galvanometer, Moving Coil PMMC and Moving Iron instrument (Repulsion and Attraction type), Electrodynamics instruments.

UNIT-II (11 Hrs.)

Measurement of Resistance: Low, Medium and High resistance measurement using Kelvin Double Bridge, Ammeter-Voltmeter method, Wheat Stone Bridge, Loss of Charge and Megger.

Measurement of Inductance and Capacitance: Maxwell Inductance, Hay's, Anderson and Schering Bridges, Measurement of frequency by Wein bridge method.

UNIT-III (11 Hrs.)

Oscilloscope: Basic principle and construction of Analog CRO, sweep modes, applications in measurement of voltage, frequency (Lissajous pattern), Introduction to Dual Trace Oscilloscope, Digital Storage Oscilloscope, sampling oscilloscope. Comparison between analog and digital oscilloscope.

UNIT-IV (11 Hrs.)

Transducers: Transducer and its classifications, basic requirements of Transducer/Sensors. Displacement Transducers: LVDT, RVDT and Piezo Electric. Resistance Thermometer, Thermistors, Thermocouples and Strain Gauge Transducer: Basic principle of operation of Resistance strain gauge.

Recommended Books

1. H. Cooper, 'Modern Electronic Instrumentation and Measurement Techniques', PHI, **1990**.
2. A.K. Sawhney, 'Electronic Instrumentation and Measurement', Dhanpat Rai & Sons, **2011**.
3. Jones and Chin, 'Electronic Instruments and Measurement', **2010**.
4. J. Toppin, 'Theory of Errors', Wessely Publishing, **2000**.

MEASUREMENT AND INSTRUMENTATION LAB.

Subject Code: BELE1-305

L T P C
0 0 2 1

Course Objectives

1. To understand the working principal and construction of the measuring instruments and recorders.
2. To measure various electrical parameters using meters and transducers.
3. To calibrate the measuring devices such as meters and transducers.

Course Outcomes

1. The students could have skills about the basic measurement circuits.
2. Ability to use the techniques and skills to operate CRO.

EXPERIMENTS

1. Study of principle of operation of various types of electromechanical measuring instruments.
2. To measure high value of DC current and voltage using shunt and multiplier.
3. To measure low resistance using wheat stone bridge.
4. To measure active and reactive power in 3-phase balanced load by one wattmeter
5. method.
6. To measure the active power in 3-phase balanced and unbalanced load by two wattmeter method and observe the effect of power factor variation on wattmeter readings.
7. To study and calibrate single phase energy meter.
8. Measurement of resistance using Kelvin's Bridge.
9. Measurement of self-inductance using Anderson's Bridge.
10. Measurement of capacitance using Schering Bridge.
11. Plotting of Hysteresis loop for a magnetic material using flux meter.
12. Measurement of frequency using Wein's Bridge.
13. To study the connections and use of Current and Potential transformers and to find out ratio error.
14. Determination of frequency and phase angle using CRO.
15. Measurement of unknown voltage using potentiometer.
16. To find 'Q' of an inductance coil and verify its value using Q-meter.

Note: At least ten experiments should be performed in semester.

ELECTRONICS DEVICES AND CIRCUIT LAB.

Subject Code: BELE1-306

L T P C

0 0 2 1

Course Objectives

1. To understand the characteristics of various semiconductor devices.
2. To understand identification and selection of various electronic components.

Course Outcomes

1. Ability to understand all types of electronics devices and circuits.
2. Ability to analyse and interpret data.

EXPERIMENTS

1. To analyse the response of Zener diode as regulator
2. To analyse the response of half wave, full wave and Bridge rectifiers.
3. To plot the input and output characteristics of CE configuration.
4. To plot the input and output characteristics of CB configuration.
5. To examine the characteristics of a Class-A amplifier.
6. To examine the characteristics of Class-B amplifier.
7. To analyse the characteristics of Class-B push-pull amplifier.
8. To analyse the characteristics of complementary symmetry amplifier.
9. To discuss the response of RC phase shift oscillator and determine frequency of oscillation.
10. To discuss the response of Hartley oscillator and determine frequency of oscillation.
11. To analyse the response of Colpitt's oscillator and determine frequency of oscillation.
12. To analyse the response of Wien Bridge oscillator and determine frequency of oscillation.
13. To study the characteristics and response of crystal oscillator.
14. To plot the characteristics of FET.
15. To plot the characteristics of MOSFET.

Note: At least ten experiments should be performed in semester.

SOFT SKILLS-I

Subject Code: BHUM0-F91

L T P C

Duration: 37 Hrs.

0 0 2 1

Course Objectives

The course aims to cause a basic awareness about the significance of soft skills in professional and interpersonal communications and facilitate an all-round development of personality.

Course Outcomes

At the end of the course, the student will be able to develop his/her personal traits and expose their personality effectively.

UNIT-1

Soft Skills: Introduction to Soft Skills, Aspects of Soft Skills, Identifying your Soft Skills, Negotiation skills, Importance of Soft Skills, Concept of effective communication.

Self-Discovery: Self-Assessment, Process, Identifying strengths and limitations, SWOT Analysis Grid.

UNIT-2

Forming Values: Values and Attitudes, Importance of Values, Self-Discipline, Personal Values - Cultural Values-Social Values-some examples, Recognition of one's own limits and deficiencies.

UNIT-3

Art of Listening: Proxemics, Haptics: The Language of Touch, Meta Communication, Listening Skills, Types of Listening, Listening tips.

UNIT-4

Etiquette and Manners: ETIQUETTE- Introduction, Modern Etiquette, Benefits of Etiquette, Taboo topics, Do's and Don'ts for Men and Women. MANNERS- Introduction, Importance of manners at various occasions, Professional manners, Mobile manners. CORPORATE GROOMING TIPS- Dressing for Office: Do's and Don'ts for Men and Women, Annoying Office Habits.

Recommended Books

1. K. Alex, S. Chand Publishers.
2. Butterfield, Jeff, 'Soft Skills for Everyone', Cengage Learning, New Delhi, 2010.
3. G.S. Chauhan and Sangeeta Sharma, 'Soft Skills', Wiley, New Delhi, 2016.
4. Klaus, Peggy, Jane Rohman & Molly Hamaker, 'The Hard Truth About Soft Skills', Harper Collins E-books, London, 2007.
5. S.J. Petes, Francis, 'Soft Skills and Professional Communication', Tata McGraw Hill Education, New Delhi, 2011.

DC MACHINES

Subject Code: BELE1-408

L T P C
3 1 0 4

Duration: 45 Hrs.

Course Objectives

1. To understand the basic concepts of D.C machines.
2. To introduce different techniques of speed control of DC machines.
3. To study different types of testing methods.

Course Outcomes

1. To understand all basic concepts of DC motors and generators.
2. To understand operation and control of DC machines.

UNIT-I (12 Hrs.)

General Concepts of DC Machines: Principles and construction: generator action, motor action, commutator, commutation, interpolar and compensating windings, brushes, armature core, armature windings, winding pitch, commutator pitch, commutator segments, armature reaction: de-magnetizing and cross magnetizing effects.

UNIT-II (11 Hrs.)

DC Generators: Operation, emf equation, effect of speed upon voltage and flux, types of DC generators. Characteristics of series, shunt and compound generators, voltage regulation, Condition for maximum efficiency, applications.

UNIT-III (10 Hrs)

DC Motors: Operation, concept of back emf, torque equation, power developed, Characteristics of DC motors (series, shunt and compound), effect of saturation and applications.

UNIT-IV (12 Hrs.)

Starters, Speed Control and Testing: Speed control of DC motors, Ward-Leonard control (Voltage control), various starting techniques for DC motors: Three-point starter, four-point starter, Electric breakings of DC shunt and series motors, Testing of DC machines: Brake test, Swinburne's test, Hopkinson's test, Retardation test, Field's test.

Recommended Books

1. P.S. Bimbhra, 'Electrical Machinery', Khanna Publishers.
2. P.K Mukherjee and S. Chakravorty, 'Electrical Machines', Dhanpat Rai, 2004.

3. I.J. Nagrath and D.P. Kothari, 'Electric Machines', Tata McGraw Hill, **2004**.
4. Fitzgerald Kingsley, and Stephen Umans, 'Electric Machinery', McGraw Hill, **2002**.
5. J.B. Gupta, 'Theory and Performance of Electrical Machinery', S.K. Kataria and Sons.
6. B.L. Theraja and A.K. Theraja, 'A Text Book of Electrical Technology', S. Chand.

DIGITAL ELECTRONICS

Subject Code: BELE1-409

**L T P C
3 1 0 4**

Duration: 45 Hrs.

Course Objectives

1. To provide knowledge about basics of digital electronics.
2. To impart knowledge about designing of digital circuits.
3. Students will use schematics and symbolic algebra to represent digital gates in the creation of solutions to design problems.

Course Outcomes

1. An ability to understand all types of combinational and sequential digital circuits and their designing.
2. Students will have skills to simplify a digital design problem as part of the systematic approach to solving a problem.

UNIT-I (12 Hrs.)

Number System and Binary Code: Introduction, Binary, decimal, Octal, hexadecimal, BCD number system, Signed and unsigned numbers, binary operations: Addition, Subtraction. Multiplication and division. Subtractions using 1's and 2's compliment. ASCII code. Excess 3 codes and Gray code. Logic gates: OR, AND, NOT, NOR, NAND, Ex-OR gates, Basic theorems of Boolean algebra, sum of products and product of sums. Minimisation using theorems, minimisation using K-map up to 4 variables.

UNIT-II (10 Hrs.)

Combinational logic circuits: Combinational circuit design, multiplexer, demultiplexer, encoders, decoders, adders, subtractors, code converters, parity checkers, BCD display drive, magnitude comparators.

UNIT-III (11 Hrs.)

Sequential circuits: Flip Flop fundamentals, different flip flop configurations: SR, JK, D, T. Edge triggered and clocked flip flops, Registers: Types of Registers, series and parallel shift: circuit diagram, timing wave form and operations. Counters: synchronous and asynchronous, Johnson counter.

UNIT-IV (12 Hrs.)

D/A and A/D Converters: Introduction, Weighted register D/A converter, binary ladder D/A converter, D/A accuracy and resolution, parallel A/D converter, Counter type A/D converter, Successive approximation A/D converter, Single and dual slope A/D converter, A/D accuracy and resolution.

Recommended Books

1. D.P. Kothari and J.S. Dhillon, 'Digital Circuits and Design', Pearson, **2015**.
2. R.P. Jain, 'Modern Digital Electronics', TMH, **2011**.
3. Malvino and Leach, 'Digital Principles and Applications', TMH, **1991**.
4. Fletcher, 'An Engg. Approach to Digital Design', PHI, Indian Ed., **2011**.

ELECTRICAL ENGINEERING MATERIALS

Subject Code: BELE1-410

L T P C
3 0 0 3

Duration: 45 Hrs.

Course Objectives

1. To provide knowledge about basics of electrical engineering materials.
2. Students will obtain skills of application of materials in daily life.

Course Outcomes

1. An ability to understand all types of magnetic and conducting materials.
2. To understand the various properties of electrical engineering materials.

UNIT-I (10 Hrs.)

Elementary Materials Science Concepts: Bonding and types of solids and its defects, resistivity, factors affecting resistivity, temperature dependence of resistivity, Skin Effect, Hall Effect.

UNIT-II (12 Hrs.)

Dielectric Properties of Insulators in Static and Alternating Field: Dielectric constant of gases, molecules and solids, internal field in solids and liquids, Properties of ferro-electric materials, polarization, types of polarizations, polarizability: atomic and molecular, frequency dependence of electronic and ionic polarizability, piezoelectricity and dielectric losses.

UNIT-III (12 Hrs.)

Magnetic Properties and Superconductivity: Magnetization of matter, magnetic material classification, ferromagnetic origin, Curie-Weiss law, soft and hard magnetic materials, Superconductivity and its origin, critical temperature, critical magnetic field, zero resistance and Meissner Effect, Type-I and Type-II superconductors, applications of superconductors.

UNIT- IV (11 Hrs.)

Conductivity of Metals: Drift velocity, relaxation time of electrons, collision time and mean free path, electron scattering and resistivity of metals.

Semiconductor Materials: Classification of semiconductors, semiconductor conductivity, temperature dependence, Carrier density and energy gap, fermi level, applications of semiconductors in electrical engineering.

Recommended Books

1. S.P. Seth, 'A Course in Electrical Engineering Materials', Dhanpat Rai and Sons, 2001.
2. Electrical Engineering Materials, T.T.T.I, Madras, 1998.
3. K.B. Raina and S.K. Bhattacharya, 'Electrical Engineering Materials', S.K. Kataria and Sons, 2004.
4. P.K. Palanisamy, 'Material Science for Electrical Engineering', Scitech Pub. (India) Pvt. Ltd., Chennai, 2011.

LINEAR CONTROL SYSTEM

Subject Code: BELE1-411

L T P C
3 1 0 4

Duration: 45 Hrs.

Course Objectives

1. To obtain transfer functions for electrical circuits, translational/rotational mechanical systems and electromechanical systems.
2. To learn basic goals of control systems in terms of transient/steady state time response behaviour.
3. To update the knowledge about control components.

Course Outcomes

1. The students will have skills to model the control systems.
2. Ability to analyse the stability of designed systems.

UNIT-I (10 Hrs.)

Introductory Concepts: Plant, Systems, Servomechanism, regulating systems, Open loop control system, closed loop control systems, linear and non-linear systems, time variant and invariant, Block diagrams, some illustrative examples.

UNIT-II (12 Hrs.)

Modeling: Force voltage analogy, force current analogy, Transfer function, Block diagram reduction technique, signal flow graphs and Mason's gain formula, characteristics equation.

Time Domain Analysis: Transient response of the first and second order systems, Time domain specifications, Steady state error and coefficients, Absolute and relative stability, Routh-Hurwitz Criterion.

UNIT-III (12 Hrs.)

Stability Analysis: Root locus technique, sketch of the root locus plot, Frequency domain analysis: Closed loop frequency response, bode plots, relative stability using bode plot. Frequency response specifications, relation between time and frequency response for second order systems. Nyquist criterion for stability.

UNIT-IV (11 Hrs.)

State Space Analysis: State space representations, transfer function from state model, state transition matrix, controllability, observability. Control components: Error detectors-potentiometers and synchros, servo motors, A.C. and D.C. techno generators, Magnetic amplifiers.

Recommended Books

1. Dorf Richard and Bishop Robert, 'Modern Control System', Addison-Wesley, Pearson, 2009.
2. K. Ogata, 'Modern Control Engineering', Prentice Hall, 2011.
3. B.C. Kuo, 'Automatic Control System', Prentice Hall, 1999.
4. I.J. Nagrah and M. Gopal, 'Control System Engineering', Wiley Eastern Ltd, 1997.
5. B.S. Manke, 'Linear Control Systems', 2002.

ELECTROMAGNETIC FIELD THEORY

Subject Code: BELE1-412

L T P C
3 1 0 4

Duration: 45 Hrs.

Course Objectives

1. To provide the knowledge about the time varying fields and Maxwell's equations.
2. To provide knowledge about the propagation of electromagnetic wave along different mediums.
3. Study of physical concept and all the important fundamental parameters of waveguides.

Course Outcomes

1. The students will learn the concepts of electromagnetic field theory and fundamental field equations.
2. The students will have skills to identify, formulates and solves engineering problems related to electromagnetic fields.

UNIT-I (11 Hrs.)

Review of Electrostatic and Magnetostatic Fields: Review of vector algebra, Review of Cartesian, Cylindrical and spherical coordinate systems, Introduction to del operator, Use of del operator as gradient, divergence, curl. Introduction to coulomb's law, Gaussian law.

Laplace's and Poisson's equation in various coordinate systems. Introduction to Ampere's law, Magnetic vector potential.

UNIT-II (11 Hrs.)

Time Varying Fields and Maxwell's Equations: Equation of continuity, Inconsistency of Ampere's law for time varying fields, Concept of displacement current, Maxwell's equation in integral and differential form (for static fields, time varying fields, free space, good conductors, harmonically varying fields), Poynting theorem.

UNIT-III (12 Hrs.)

Uniform Plane Waves: Introduction, Uniform plane wave propagation, Wave equations: Wave equations for free space, Wave equations for conductors. Transverse nature of uniform plane waves, Reflection of electromagnetic waves by perfect conductor and perfect dielectric, wave impedance and propagation constant, depth of penetration, surface impedance.

UNIT-IV (11 Hrs.)

Wave Guides: Introduction, simple waveguides between two infinite and parallel conducting plates, Transverse Electric (TE) Waves or H-Waves, Transverse magnetic (TM) Waves or E-Waves, Characteristics of TE and TM waves, Transverse Electromagnetic (TEM) waves and its characteristics.

Recommended Books

1. Jordan and Balmain, 'Electromagnetic Wave', PHI and Radiation System, 2010.
2. Kraus, 'Electromagnetics', T.M.H. 2003.
3. W.H. Hayt and J.A. Buck, 'Problem and Solutions in Electromagnetics', Tata McGraw Hill, 1999.
4. W.H. Hayt, 'Engineering Electromagnetic', Tata McGraw Hill, 2012.

ELECTRICAL MACHINE-I LAB.

Subject Code: BELE1-413

L T P C
0 0 2 1

Course Objectives

1. To understand the characteristics of D.C. Machines.
2. To understand speed control methods and testing methods.
3. To study universal motor.

Course Outcomes

1. To acquire skills to operate all types of dc machines.
2. Ability to analyse the speed control and efficiency of DC machine.

EXPERIMENTS

1. To study various components/cut-section of DC machines.
2. To perform starting techniques of various DC machines.
3. To obtain torque and speed characteristics of a D.C. Shunt motors.
4. To obtain external characteristics of a D.C. shunt generators.
5. To obtain external characteristics of a D.C. series generators.
6. To obtain external characteristics of DC compound generators.
7. Speed control of a dc shunt motor by varying armature circuit and field circuit methods.
8. To obtain performance characteristics of universal motor.
9. To perform Swinburne's Test.
10. To perform Hopkinson's Test.
11. To perform the Brake Load Test.
12. To calculate the power rating of DC machines.
13. To determine losses and efficiency of DC machines.

Note: At least ten experiments should be performed in semester.

CONTROL SYSTEM LAB.

Subject Code: BELE1-414

L T P C

0 0 2 1

Course Objectives

1. To understand the basics concepts of MATLAB software.
2. To introduce variety of control system strategies.
3. To comment about the stability of designed systems.

Course Outcomes

1. To acquire skills to understand all types of control components
2. Ability to analyse the stability of control systems

EXPERIMENTS

1. Familiarization with MATLAB control system toolbox, MATLAB Simulink toolbox and PSPICE.
2. Determination of step response for first order and second order system with unity feedback and their display on CRO. Calculation and verification of time constant, peak overshoot, settling time etc. from the response.
3. Simulation of step response and impulse response for type-0, type-1 and type-2 systems with unity feedback using MATLAB and PSPICE.
4. Determination of Root Locus, Bode-Plot, Nyquist Plot using MATLAB-Control system toolbox for 2nd order system. Determination of different control system performance indices from the plots.
5. Experimental determination of approximate transfer function from Bode plot.
6. Evaluation of steady state error, settling time, percentage peak overshoot, gain margin, phase margin, with addition of lead compensator and by compensator in forward path transfer function for unity feedback control system using PSPICE.
7. Design of a second order linear time invariant control system and study of system response with unit step input.
8. To study the characteristics of potentiometers and to use 2-potentiometers as an error detector in a control system.
9. To study the synchro Transmitter-Receiver set and to use it as an error detector.
10. To study the Speed-Torque characteristics of an AC Servo Motor and to explore its applications.
11. To study the Speed-Torque characteristics of a DC Servo Motor and explore its applications.
12. To study various electro-mechanical transducers i.e. resistive, capacitive and inductive transducers.
13. To study the speed control of an A.C. Servo Motor using a closed loop and an open loop system.
14. To study the operation of a position sensor and study the conversion of position in to corresponding voltage

Note: At least ten experiments should be performed in semester.

DIGITAL ELECTRONICS LAB.

Subject Code: BELE1-415

L T P C

0 0 2 1

Course Objectives

1. To give students a practical knowledge about all types of digital circuits.
2. To give students a working knowledge to connect digital circuits and verify their truth

tables.

3. To give students knowledge of different combinational and sequential circuits.

Course Outcomes

1. Ability to test and verify working and truth tables of combinational and sequential circuits.
2. To give knowledge of various logic families.

EXPERIMENTS

1. To Study Logic Gates: Truth-table verification of OR, AND, NOT, XOR, NAND and NOR gates and realization of OR, AND, NOT and XOR functions using universal gates.
2. To design Half Adder using Logic gates on bread board.
3. To design Full Adder using Logic gates on bread board.
4. To design Half Subtractor using Logic gates on bread board.
5. To design Full Subtractor using Logic gates on bread board.
6. To design 4-Bit Binary-to-Gray Code Converter on bread board.
7. To design 4-Bit Gray-to-Binary Code Converter on bread board.
8. To study and design 4-Bit magnitude comparator using logic gates on bread board.
9. Design and verification of Truth-table of multiplexer.
10. Realization of Half adder and Full adder using MUX.
11. Design and verification of Truth-table of Demultiplexer.
12. Realization of half subtractor and full subtractor using DEMUX.
13. To study and verify Truth-table of RS, JK, D, JK Master Slave Flip Flops.
14. To design MOD-7 Synchronous up-counter using JK/RS/D Flip Flops.
15. To Study different shift registers: SIPO, SISO, PIPO, and PISO.
16. To Study digital logic families.

Note: At least ten experiments should be performed in semester.

SOFT SKILLS-II

Subject Code: BHUM0-F92

L T P C
0 0 2 1

Course Objectives

The course aims to address various challenges of communication as well as behavioural skills faced by individual at work place and organizations. Also, it aims to enhance the employability of the students.

Course Outcomes

At the end of the course the student will be able to understand the importance of goal setting. They will also be able to handle stress in their lives and future in a better way.

UNIT-1

Developing Positive Attitude: Introduction. Formation of attitude. Attitude in workplace. Power of positive attitude. Examples of positive attitudes. Negative attitudes. Examples of negative attitude. overcoming negative attitude and its consequences.

Improving Perception: Introduction. Understanding perception. perception and its application in organizations.

UNIT-2

Career Planning: Introduction. Tips for successful career planning. Goal setting- immediate, short term and long term. Strategies to achieve goals. Myths about choosing career.

UNIT-3

Art of Reading: Introduction. Benefits of reading. Tips for effective reading. the SQ3R technique. Different stages of reading. determining reading rate of students. Activities to increase the reading rate. Problems faced. Becoming an effective reader.

UNIT-4

Stress Management: Introduction. meaning. positive and negative stress. Sources of stress. Case studies. signs of stress. Stress management tips. Teenage stress.

Recommended Books

1. K. Alex, S. Chand Publishers.
2. Rizvi, M. Ashraf, 'Effective Technical Communication', McGraw Hill.
3. Mohan Krishna & Meera Banerji, 'Developing Communication Skills', Macmillan.
4. Kamin, Maxine, 'Soft Skills Revolution: A Guide for Connecting with Compassion for Trainers, Teams & Leaders', Pfeiffer & Amp; Company, Washington, DC, 2013.

ASYNCHRONOUS MACHINES

Subject Code: BELE1-516

L T P C
3 1 0 4

Duration: 48 Hrs.

Course Objectives:

1. To impart knowledge of the constructional features and principle of operation of three-phase and single-phase induction machines.
2. To impart knowledge about methods of starting and speed control of induction motors.
3. To make the students aware about construction, principle of operation and applications of special purpose motors.

Course Outcomes:

1. The students will be having skills to analyse the performance of the asynchronous machines using the phasor diagrams and equivalent circuits.
2. To gain knowledge of speed control and testing of asynchronous machines.
3. To gain the knowledge to select appropriate asynchronous machine for any application and appraise its significance.

UNIT-I (18 Hrs.)

Three Phase Induction Motors: Constructional features, Production of rotating field in space distributed three-phase winding, Principle of operation, Concept of slip, rotor frequency, current, torque and power output, Types of induction motors, Analogy between induction motor and transformer, no load and blocked rotor test, Circle diagram, Equivalent circuit parameters, Phasor diagram, Torque-slip characteristics, Effect of rotor circuit resistance, Crawling and Cogging, Cage motors (double cage and deep bar motor).

UNIT-II (12 Hrs.)

Starting Methods and Speed Control: Starting methods of squirrel cage and slip ring induction motor, Different speed control methods, effect of voltage injection in rotor circuit of slip ring induction motor.

Induction Generator: Isolated and Grid mode operation, method of excitation, performance characteristics of three-phase self-excited induction generator, introduction to doubly fed induction generator.

UNIT-III (10 Hrs.)

Single Phase Motors: Introduction, Double revolving field theory, types of single phase motors (Split phase, capacitor start, capacitor run, capacitor start and run) and their characteristics, shaded pole motor: working principle and characteristics. Reluctance motor: construction, principle of operation and applications.

UNIT-IV (8 Hrs.)

Special Purpose Motors: Stepper Motor: construction, principle of operation and applications. Linear Induction Motor: construction, principle of operation and applications. Universal Motor: construction, principle of operation and applications.

Recommended Books

1. A.E. Fitzgerald, C. Kingsley and S.D. Umans, 'Electric Machinery', 6th Edn., McGraw Hill, 1998.
2. E.H. Langsdorff, 'Principles of A.C. Machines', McGraw Hill, 2010.
3. I.J. Nagrath and D.P. Kothari, 'Electrical Machines', 4th Edn., Tata McGraw Hill, 2011.
4. P.S. Bimbhra, 'Electrical Machinery', Khanna Publishers, 1999.
5. M.G. Say, 'Alternating Current Machines', 5th Edn., Sir Isaac Pitman and Sons Ltd., 2004.

POWER ELECTRONICS AND DRIVES

Subject Code: BELE1-517

**L T P C
3 1 0 4**

Duration: 48 Hrs.

Course Objectives:

1. To make the students aware about the power electronic devices and construction, operation and characteristics of most popular member of thyristor family i.e. SCR.
2. To acquaint them with basic concepts of operation of different types of converters.
3. To impart knowledge about application of converters to motor drives.

Course Outcomes:

1. The students will learn the operation and characteristics of power electronic devices
2. The students will be able to analyse operation of different types of converter circuits such as; AC-DC, DC-DC, AC-AC and DC-AC.
3. The students will be able to understand application of converters for control of motor drives.

UNIT-I (14 Hrs.)

Introduction: Thyristor family and SCR, Constructional features of SCR, its static and dynamic characteristics, turn-on and turn-off methods and firing circuits, Ratings and protection of SCR'S, series and parallel operation, commutation circuits.

UNIT-II (12 Hrs.)

Phase Controlled Converters: Principle of phase control, single phase and three phase converter circuits with different types of loads, dual converters and their operation.

DC Choppers: Principle of chopper operation, control strategies, types of choppers, step up and step down choppers, voltage, current and load-commutated choppers.

UNIT-III (14 Hrs.)

Inverters: Single phase Voltage source bridge inverters, Modified Mc-Murray half bridge inverter, series inverters, three phase bridge inverters with 180⁰ and 120⁰ modes. Single phase PWM inverters, Current source inverters.

AC Voltage Controllers: Types of single-phase voltage controllers, single-phase voltage controller with R and RL type of loads.

Cycloconverters: Principle of operation, single phase to single phase step up and step down Cycloconverters, three phase to single phase cycloconverters.

UNIT-IV (08 Hrs.)

DC Motor Drives: DC motor drive – starting, braking, transient analysis, speed control, controlled rectifier converters for DC drives and chopper fed DC drives.

AC Motor Drives Induction motor drive – starting, braking, transient analysis, speed control, ac controller fed induction motor, voltage source inverter, current source inverter and cyclo-converter fed induction motor drive.

Recommended Books

1. G.K. Dubey, S.R. Doradla, A. Joshi, R.N.K. Sinha, 'Thyristorised Power Controllers', New Age International (P) Limited, Publishers, 2004.
2. M. Rashid, 'Power Electronics', Prentice Hall of India Private Ltd., 2006.

3. P.S. Bimbhra, 'Power Electronics', Khanna Publishers, 2004.
4. Bimal Bose, 'Power Electronics and Motor Drives', Academic Press, 2006.
5. P.C. Sen, 'Power Electronics', Tata McGraw Hill Company Ltd., New Delhi, 1992.

GENERATION AND ECONOMICS OF ELECTRIC POWER

Subject Code: BELE1-518

L T P C
3 1 0 4

Duration: 48 Hrs.

Learning Objectives:

1. To familiarize the students with different types of loads and load curves.
2. To apprise them with different types of costs involved in power plant and tariffs imposed on the electricity consumers
3. To impart knowledge about selection and economic operation of steam plants.
4. To impart knowledge about hydrothermal coordination.

Course Outcomes:

1. Students will get knowledge of different types of loads and related terminology.
2. They will learn about various costs involved in the power plants and tariffs imposed on different categories of consumers.
3. They will gain the knowledge about co-ordinated operation of Hydro and Steam power plants.

UNIT-I (10 Hrs.)

Loads and Load Curves: Types of load (fixed voltage loads, resistive loads, Inductive motor loads, mechanical load), effect of load on supply voltage, maximum demand, group diversity factor, peak diversity factor, types of load, chronological load curves, load-duration curve, mass curves, load factor, capacity factor, utilization factor, base load and peak load plants, load forecasting.

UNIT-II (12 Hrs.)

Power Plant Economics: Capital cost of plants, annual fixed cost, operating costs and effect of load factor on cost of energy, depreciation, tariffs and power factor improvement, objectives of tariff making, different types of tariff (domestic, commercial, agricultural and industrial loads). Need for power factor improvement, power factor improvement using capacitors, determination of economic power factor.

UNIT-III (14 Hrs.)

Selection of Plant: Plant location, plant size, number and size of units in plants, economic comparison of alternatives based on annual cost, rate of return, present worth and capitalized cost methods. Economic operation of steam plants, methods of loading turbo-generators, input- output curve, heat rate, incremental cost, method of Lagrangian multiplier, effect of transmission losses, co-ordination equations, and iterative procedure to solve co-ordination equations.

UNIT-IV (12 Hrs.)

Hydro-Thermal Co-ordination: Advantages of combined working of Run-off River plant and steam plant, reservoir hydro plants and thermal plants, long-term operational aspects, scheduling methods. Cogeneration: Definition and scope, Topping and Bottoming Cycles, Benefits, cogeneration technologies.

Recommended Books

1. M.V. Deshpande, 'Power Plant Engineering', Tata McGraw Hill, 2004.
2. M.M. EI-Wakit, 'Power Plant Engineering', McGraw Hill, USA, 2010.
3. D.P. Kothari and I.J. Nagrath, 'Power System Engineering', Tata McGraw Hill, 2008.

4. S.C. Arora and S. Dom Kundwar, 'A Course in Power Plant Engineering', 6th Revised Edn., Dhanpat Rai, 2011-12.
5. P.K. Nag, 'Power Plant Engineering', Tata McGraw Hill, 2014.
6. B.R. Gupta, 'Generation of Electrical Energy', S. Chand, 2017.

POWER ELECTRONICS LAB.

Subject Code: BELE1-519

L T P C

0 0 2 1

Course Objectives:

1. To obtain the characteristics of SCR and UJT and to obtain triggering pulses for them.
2. To verify the performance of various converter circuits by measuring the currents and voltages at different points in the circuit and to display their waveforms.
3. To control speed of motors by using thyristors.

Course Outcomes:

1. Students will be able to verify the characteristics of SCR and UJT and triggering pulses for them.
2. They will be able to visualize and analyse the performance of various converter circuits.
3. They will be able to control the speed of motors using thyristors.

EXPERIMENTS

1. To obtain V-I characteristics of SCR and measure latching and holding currents.
2. To plot V-I Characteristics of UJT.
3. To obtain triggering wave forms for SCR using R and RC firing circuits.
4. To obtain output voltage waveforms of single phase half wave controlled rectifier for R-L load.
5. To obtain output voltage wave forms for single phase full-wave controlled rectifiers with resistive and inductive loads.
6. To simulate three phase bridge rectifier and draw load voltage and load current waveform for resistive and inductive loads.
7. To study different types of chopper circuits and obtain waveforms for at least one of them.
8. To simulate single phase inverter using different modulation techniques and obtain load voltage and load current waveform for different types of loads.
9. To simulate single phase full wave ac voltage controller and draw load voltage and load current waveforms for inductive load.
10. To study single phase cycloconverter.
11. To study speed control of induction motor using thyristor.
12. To study speed control of DC motor using thyristor.

Note: At least ten experiments should be performed in the semester.

Recommended Books

1. K.R. Varmah, K. John Ginnes, Abraham Chikku, 'Power Electronics, Design, Testing and Simulation, Laboratory Manual', 1st Edn., CBS Publishers & Distributors Pvt. Ltd., 2017.
2. O.P. Arora, 'Power Electronics Laboratory, Theory, Practice and Organization', Narosa Publishing House, **2007.**

ELECTRICAL: ESTIMATION AND COSTING LAB.

Subject Code: BELE1-520

L T P C

0 0 2 1

Course Objectives:

1. To know about layout of wiring circuits of electrical installations of a residential building or/and an educational institute or/and an industry.
2. To estimate the various costs involved in these electrical installations.
3. To know about wiring arrangements of motor control circuits and to do energy audit of a small utility.

Course Outcomes:

1. The students will become familiar with the layout of wiring circuits of electrical installations and those of motor control circuits.
2. They will be able to estimate the various costs involved in these electrical installations.
3. They will learn to do energy audit of a small utility.

EXPERIMENTS

1. To study Indian electricity act 2003.
2. To carry out wiring diagram of residential building/educational institute/industry.
3. To study design parameters of electrical panel boards.
4. To estimate the cost of a domestic installation (Residential building/laboratory/drawing hall) with concept of illumination design.
5. To estimate the cost of industrial installation.
6. To estimate the cost of overhead service connection.
7. To estimate the cost of underground service connection.
8. To estimate the load and cost of any five electrical appliances.
9. To estimate the cost of repair and maintenance of any five domestic appliances.
10. To study various types of light sources and lighting schemes.
11. To draw wiring diagrams of motor control circuits for starting of induction and synchronous motors.
12. To carryout electrical energy audit of laboratory/office/workshop.

Note: At least ten experiments should be performed in semester.

Recommended Books

1. Singh Surjit, 'Electrical Estimating and Costing', Dhanpat Rai & Co., **Reprint 2013**.
2. Deb Tanmoy, 'Installation, Testing, Commissioning and Maintenance of Electrical Apparatus', Dhanpat Rai & Co., **Reprint 2013**.

SOFT SKILLS-III

Subject Code: BHUM0-F93

L T P C

Duration: 37 Hrs.

0 0 2 1

Course Objectives:

The course aims to equip the students with effective writing skills in English. Also, to make the students understand their role as team players in organizations.

Course Outcomes

At the completion of the course, the student will become well –versed with the behavioural skills. They will also understand the role of body language and non-verbal communication during the interview process.

UNIT-1

ART OF WRITING - Introduction, Importance of Writing Creative Writing, Writing tips, Drawback of written communication.

Art of Business Writing: Introduction, Business Writing, Business Letter, Format and Styles, Types of business letters, Art of writing correct and precise mails, Understand netiquette.

UNIT-2

Body Language: Introduction- Body Talk, Forms of body language, uses of body language, Body language in understanding Intra and Inter-Personal Relations, Types of body language, Gender differences, Gaining confidence with knowledge of Kinesics.

UNIT-3

Team Building and Team Work: Introduction, Meaning, Characteristics of an effective team, Role of a Team Leader, Role of Team Members, inter group Collaboration- Advantages, Difficulties faced, Group Exercises-Team Tasks and Role-Play, Importance of Group Dynamics.

UNIT-4

Time Management: Introduction, the 80-20 Rule, three secrets of Time Management, Time Management Matrix, Effective Scheduling, Time Wasters, Time Savers, Time Circle Planner, Difficulties in Time Management, Overcoming Procastination.

Recommended Books

1. K. Alex, S. Chand Publishers.
2. R.C. Sharma and Krishna Mohan, 'Business Correspondence and Report Writing', TMH, New Delhi, 2016.
3. N. Krishnaswami and T. Sriraman, 'Creative English for Communication', Macmillan.
4. Penrose, John M., et al., 'Business Communication for Managers', Thomson South Western, New Delhi, 2007.
5. Holtz, Shel, 'Corporate Conversations', PHI, New Delhi, 2007.

POWER PLANT ENGINEERING

Subject Code: BELE1-556

**L T P C
3 0 0 3**

Duration: 40 Hrs.

Course Objectives:

1. To introduce the students to the classification of steam and hydro-electric power plants and make them familiar with the main equipment and machinery used in them.
2. To provide them basic concepts of nuclear, gas and diesel power plants.
3. To impart knowledge about pollution control and combined operation of different plants.

Course Outcomes:

1. The students will acquire knowledge about various equipment used in thermal, hydro and nuclear power generation.
2. They will also become familiar with equipment used in gas and diesel power plants.
3. They will come to know about the importance of co-ordinated operation of different power plants and methods of pollution control.

UNIT-I (14 Hrs.)

Steam Generators, Condensers and Turbines: Classification of steam generators, Types of condensers, effect of air in condensers, steam nozzles, types of steam turbine efficiencies.

Steam Power Plant: Classification, Operation, Description of Rankin cycle, coal handling system, combustion system, Ash handling, Feed pumps, Heat exchangers, Economizers, Super heaters, Reheaters, Air preheaters, Feed water heaters, Evaporators.

UNIT-II (10 Hrs.)

Hydro-Electric Power Plants: Hydrological cycle, Hydrograph, Flow duration curve, Classification of hydro plants, Selection of water turbines for hydro power plant.

Nuclear Power Plants: Nuclear physics, Binding energy, Radioactive decay. Fertile material, Mass defect, Nuclear reactions type and application, Generation of nuclear energy by fission, Nuclear reactors. Safety measures, Future of nuclear power.

UNIT-III (8 Hrs.)

Gas Turbine: Elements of gas turbines, Open and closed cycles for gas turbines, Performance terms, Plant layout, applications.

Diesel Power Plants: Classifications of IC Engines and their performance, four stroke and two stroke diesel engines, combustion phenomenon; Essential components, Cetane number, knocking, super charging, operation and layout of diesel power plant.

UNIT-IV (8 Hrs.)

Combined Operation of Different Power Plants: Advantages of combined operation of plants, load division between power stations, coordination of different types of Power Plants.

Pollution Control: Pollution from thermal and nuclear plants, Particulate emission and control, electrostatic precipitator, solid waste disposal.

Recommended Books:

1. Chakrabarti, Soni, Gupta and Bhatnagar, 'A Textbook on Power System Engineering', Dhanpat Rai & Co., 2013.
2. M.M. EI-Wakil, 'Power Plant Technology', 2nd Reprint, Tata McGraw Hill Edn., 2010.
3. R.K. Rajput, 'Power Plant Engineering', 4th Edn., Luxmi Publications, 2010.
4. P.C. Sharma, 'Power Plant Engineering', Kataria and Sons, 2009.
5. B.G.A. Skrotzki and W.A. Vapot, 'Power Station Engineering and Economy', 31st Reprint, Tata McGraw Hill Education Pvt. Ltd., 2009.
6. P.K. Nag, 'Power Plant Engineering', 4th Edn., McGraw Hill Education (India) Pvt. Ltd., 2014.
7. G.R. Nagpal, 'Power Plant Engineering', 16th Edn., Khanna Publishers, 2013.
8. S.C. Arora, S. Domkundwar, 'Power Plant Engineering', 6th Edn., Dhanpat Rai, 2013.

SIGNALS AND SYSTEMS

Subject Code: BELE1-557

L T P C
3 0 0 3

Duration: 40 Hrs.

Course Objectives:

1. To understand the classification of signals.
2. To apply Fourier series and Fourier Transformation to periodic and aperiodic signals.
3. To introduce the concepts of probability of occurrence of random events.
4. To understand different types of noise associated with signals.

Course Outcomes:

1. The students will learn about various types of signals and systems.
2. They will be able to analyse these signals using Fourier series and transform.
3. The students will learn to analyse various types of noise in the system.

UNIT-I (10 Hrs.)

Introduction: Classification of Signals and Systems, Linear time invariant systems, Convolution, Representation of signals in terms of impulses, Signal Representation using Fourier Series, Complex and Exponential Fourier Series, Fourier Series Representation of Periodic Signals, Properties of Fourier series, Parseval's theorem.

UNIT-II (10 Hrs.)

Signal Analysis: Aperiodic Signal Representation using Fourier Transforms, Fourier Transforms of Periodic Power Signals, Signal Transmission through Linear Networks,

Convolution Theorem and its graphical interpretation, Sampling Theorem, Correlation, Autocorrelation.

UNIT-III (10 Hrs.)

Probability: Introduction to Probability Theory, Definition of Probability of Random Events, Joint and Conditional Probability, Cumulative Distribution Function (CDF), Probability Density Functions (PDF) and Statistical Averages of random variables, introduction to random processes.

UNIT-IV (10 Hrs.)

Noise: Thermal Noise, Shot noise, Partition noise, Flicker noise, Gaussian Noise, Noise in Bipolar Junction Transistors (BJTs), FET noise, Equivalent input noise, Signal to Noise Ratio (SNR), Noise Temperature, Noise equivalent Bandwidth, Noise Figure, Experimental determination of Noise Figure.

Recommended Books

MICROPROCESSORS AND MICROCONTROLLERS

Subject Code: BELE1-558

**L T P C
3 0 0 3**

Duration: 40 Hrs.

Course Objectives:

1. To acquire detailed knowledge about architecture and operation of 8085 microprocessor
2. To study 8051 microcontrollers in detail.
3. To interface peripheral devices with microprocessors and microcontrollers.

Course Outcomes:

1. The students will learn about architecture, operation, instruction set and programming of 8085 microprocessors.
2. The students will learn about architecture, operation, instruction set and programming of 8051 microcontrollers.
3. Students will learn how to interface 8085 and 8051 with peripheral devices

UNIT-I (10 Hrs.)

History and Evolution: Background history of Microprocessors, Introduction to Basic features, General Architecture of Microprocessors, Recent trends and Applications.

8085 Microprocessor: Architectural Block Diagram, Schematic and Pin diagrams, Pin functions, Bus Organization, Internal operations and registers, externally initiated operations, Timing and Control Unit, Microprocessor communication, Multiplexing of address/data bus, Generation of control signals, 8085 machine cycles, Timing Diagrams Addressing Modes, Instruction Set, Interrupts, Programming Examples, Direct Memory Access. Peripheral Controllers: USART (8251), RS-232C, Programmable Peripheral Interface (8255), Programmable Interrupt Controller (8259) and their applications.

UNIT-II (13 Hrs.)

8051 Microcontroller Architecture: Introduction to MCS -51 Family microcontrollers, Architectural block Diagram, Pin diagram and Pin Functions, General Purpose and Special

Function Registers, Oscillator and clock circuit, Reset circuit, I/O Port circuits, Memory organization, Internal program and data memory.

Introduction to Program Development Tools (IDE): Concept of IDE, Editor, Assembler, Compiler, Linker, Simulator, Debugger and assembler directives.

8051 Assembly language programming: Programming model of 8051, Addressing modes, data transfer instructions, I/O Port programming, Arithmetic and Logical instructions, Bit level instructions, Branching instructions (Jump and loop Jump and call), Concept of stack, subroutine and related instructions, writing programs (like time delay using loop, data conversions HEX to ASCII, BCD to ASCII, use of look up table etc.) in assembly language 8051 and testing the same using IDE.

UNIT-III (10 Hrs.)

External Memory Interfacing: Memory address decoding, interfacing 8031/8051 with ROM/EPROM and Data ROM.

8051 Timer/Counter and Programming: Use of counter as timer, Timer/Counters and associated registers, Various modes of timer/counter operations, Time delay programs in Assembly language/ Embedded C.

8051 Serial Port and Programming: Basics of serial communication, RS232 standards, 8051 connections to RS232, Serial data input/output and associated registers, Various modes of serial data communication, serial data communication programs in Assembly language/ Embedded C.

8051 Interrupts: Concept of Interrupt, interrupt versus polling, Types of interrupts in 8051, Reset, interrupt control and associated registers, interrupt vectors, Interrupt execution, RETI instruction, software generated interrupt, interrupt handler subroutine for timer/counter and serial data transmission/reception in Assembly language/ Embedded C.

UNIT-IV (7 Hrs.)

Applications and design of microcontroller based systems: Interfacing of LEDs, 7 Segment display device, LCD display, DIP Switches, Push Button switches, Key debounce techniques, Keyboard connections, load per key and matrix form, Interfacing A/D converter, D/A converter, Relay, Opto-isolator, stepper motor and DC motor

INSTRUMENTATION ENGINEERING

Subject Code: BELE1-559

L T P C
3 0 0 3

Duration: 40 Hrs.

Course Objectives:

1. To acquire knowledge about the various elements of instrumentation systems.

2. To acquire knowledge about working of data acquisition and corresponding signal conditioning.
3. To know about different types of display devices and recorders.

Course Outcomes:

1. Student will get knowledge about various types of transducers, signal conditioning and data acquisition systems.
2. Students will get acquainted with digital measurement systems, display devices and recorders.
3. Students will be able to know about data transmission and telemetry.

UNIT-I (12 Hrs.)

Transducers: Introduction to sensors, transducers, detectors, actuators, Electrical transducers, and its classification, Characteristics and choice of transducers, Resistive and Capacitive transducers, Potentiometers, Strain gauges and its types, Thermistors, RTD, Thermocouples, LVDT, RVDT, Piezo electric transducers, Hall effect transducers, Encoders, Synchronos.

UNIT-II (10 Hrs.)

Signal Conditioning: Introduction, role of operational amplifiers in signal conditioning, characteristics of op-amps, instrumentation amplifier, filters, general consideration of A/D and D/A convertors.

Data Acquisition Systems: instrumentation systems and its types, Analog data acquisition system, Digital data acquisition system, recorders, multiplexing and sample/hold circuits in data acquisition system.

UNIT-III (10 Hrs.)

Display Devices: Introduction, digital display methods, segmental displays, Dot Matrices, rear projection display, LED, LCD, segmental gas discharge displays, Electronic counters, digital voltmeters and its types.

Recorders: Requirement of recording, Analog and digital recorders, Graphic recorders, Strip chart recorders, Null type recorders, Potentiometric type recorders, single and multi-point recorders, X-Y records, Ultraviolet recorders, magnetic tape recorders, Frequency and pulse duration modulation type recording, Introduction to direct recording.

UNIT-IV (8 Hrs.)

Digital Measurement Systems: Introduction, types of tools used in digital systems, digital instruments and its types, microprocessor based instrumentation

Data Transmission and Telemetry: methods of data transmission, general telemetry systems, types of telemetry systems, modulations in telemetry, transmission and media channels.

Recommended Books

SYNCHRONOUS MACHINES

Subject Code: BELE1-622

**L T P C
3 1 0 4**

Duration: 48 Hrs.

Course Objectives:

1. To make the students aware about the general aspects of synchronous machines.
2. To apprise the students about the construction, operation and characteristics of alternators and synchronous motors.
3. To make them to understand the underlying aspects of parallel operation of alternators.

Course Outcomes:

Students will be able to

1. Understand about the general aspects and winding terminology used in 3- ϕ synchronous machines and 1- ϕ synchronous motors.
2. Analyse the various methods of voltage regulation and EMF equations of alternators.
3. Memorize power-angle characteristics of synchronous machines and the working and characteristics of synchronous motors.
4. Understand the concepts about parallel operation and transient conditions of alternators.

UNIT-I (10 Hrs.)

General Aspects: Construction and working principle of synchronous machines, Excitation systems, Production of sinusoidal electromotive force (EMF) and its equation, flux and magnetomotive force (MMF), phasor diagrams, cylindrical and salient pole rotors, pitch factor, distribution factor.

UNIT-II (14 Hrs.)

Alternators: Construction, Phasor diagram of cylindrical rotor alternator, ratings, armature reaction, determination of synchronous reactance; open-circuit and short-circuit characteristics, short-circuit ratio, short-circuit loss. Determination of voltage regulation: EMF, MMF and zero power factor method. Power flow through inductive impedance, Power-angle characteristics of cylindrical and salient pole synchronous machines, Two-reaction theory of salient pole machines, power factor control.

UNIT-III (12 Hrs.)

Synchronous Motors: Operating characteristics, power-angle characteristics, condition for maximum power, V-curves and inverted V-curves, methods of starting, synchronous motor applications, synchronous condenser, Hunting, damper windings, Hysteresis motors.

UNIT-IV (12 Hrs.)

Parallel Operation of Alternators: Conditions for synchronization of single phase and three phase alternators, conditions for parallel operation, synchronizing power, current and torque, effect of increasing excitation of one of the alternators, effect of change of speed of one of the alternators, effect of unequal voltages, load sharing.

Recommended Books

4. M.G. Say, 'Alternating Current Machines', 5th Edn., Sir Isaac Pitman and Sons Ltd., 2004.
5. S. Sarma Mulukutla and Mukesh K. Pathak, 'Electric Machines', 3rd Indian Reprint, CENGAGE Learning, 2009.

POWER SYSTEM-I (TRANSMISSION AND DISTRIBUTION)

Subject Code: BELE1-623

**L T P C
3 1 0 4**

Duration: 48 Hrs.

Course Objectives:

1. To introduce the students to the structure of power and distribution systems.
2. To introduce them to overhead transmission lines and underground cables and make them to understand their operating characteristics.
3. To make them familiar with the components and the mechanical design aspects of overhead transmission lines.

Course Outcomes:

1. Students will be able to understand power distribution systems.
2. Students will be skilled to analyse performance of transmission lines and underground cables.
3. Students will be able to select and design overhead line insulators and transmission lines.

UNIT-I (12 Hrs.)

Structure of Power System: Growth of power systems: Indian overview, Interconnections and their advantages, Electricity act 2003, Environmental and safety measures.

Distribution Systems: DC 2-wire and 3-wire systems, AC single phase, three phase and 4-wire systems, and comparison of copper efficiency. Distribution Systems: primary and secondary distribution systems, concentrated and uniformly distributed loads on distributors; one and both ends, ring distribution, sub mains and tampered mains.

UNIT-II (12 Hrs.)

Overhead Transmission Lines: Materials and types of conductors, line parameters; calculation of inductance and capacitance of single and double circuit transmission lines, three phase lines with stranded and bundle conductors, generalized ABCD constants and equivalent circuits of short, medium and long lines. Line performance: regulation and efficiency of short, medium and long lines, series and shunt compensation.

UNIT-III (12 Hrs.)

Overhead Line Insulators and Mechanical Design of Transmission Lines: Type, string efficiency, voltage distribution in string of suspended insulators, grading ring, preventive maintenance. Different types of towers, sag-tension calculations, Corona-losses, radio and audio noise, transmission line-communication line interference, Comparison of EHVAC and HVDC transmission systems.

UNIT-IV (12 Hrs.)

Underground Cables: classification of cables based upon voltage and dielectric material, insulation resistance and capacitance of single core cable, dielectric stress, capacitance of 3 core cables, methods of laying, heating effect, Maximum current carrying capacity, cause of failure, comparison with overhead transmission lines.

Recommended Books

3. C.L. Wadhwa, 'Electric Power Systems', 7th Edn., New Age International Publishers, **2016**.
4. J. Grainger John and Jr. W.D. Stevenson, 'Power System Analysis', McGraw Hill, **1994**.

ELECTRICAL MACHINES-II LAB.

Subject Code: BELE1-624

L T P C

0 0 2 1

Course Objectives:

1. To plot speed-torque characteristics of three-phase and single-phase induction motors.
2. To obtain equivalent circuit parameters of three-phase and single-phase induction motors.
3. To study speed control of induction motors using different techniques.
4. To plot characteristics of a three-phase alternator and a synchronous motor.
5. To synchronise two 3-phase alternators by different methods

Course Outcomes:

Students will be able to

1. Obtain equivalent circuit parameters of single-phase and three-phase Induction motors.
2. Control speed of Induction motors by different methods.
3. Draw open and short circuit characteristics of three-phase alternator and V and inverted V curves of synchronous motor.
4. Find out voltage regulation of an alternator by different tests.
5. Synchronise two or more 3-phase alternators.

EXPERIMENTS

1. To perform load-test on three-phase induction motor and to plot speed-torque characteristics.
2. To perform no-load and blocked rotor test on three-phase induction motor to obtain equivalent circuit parameters and to draw circle diagram.
3. To study the speed control of three-phase induction motor by Kramer's method.
4. To study the speed control of three-phase induction motor by cascading of two induction motors.
5. To study star- delta starters and
 - a) To draw electrical connection diagram.
 - b) To start the three-phase induction motor using it.
 - c) To reverse the direction of three-phase induction motor.
6. To start a three-phase slip ring induction motor by inserting different levels of resistance in the rotor circuits and to plot speed- torque characteristics.
7. To perform no-load and blocked rotor test on single-phase induction motor and to determine the parameters of equivalent circuit.
8. To perform load test on single-phase induction motor and plot speed-torque characteristics.
9. To perform no load and short circuit test on three-phase alternator and draw open and short circuit characteristics.
10. To find voltage regulation of an alternator by zero power factor (ZPF) method.
11. To study effect of variation of field current upon the stator current and power factor of synchronous motor running at no load and draw V and inverted V curves of motor.
12. To synchronise two 3-phase alternators using dark lamp method, and two-bright & one dark lamp method.
13. To start a synchronous motor using appropriate method.

Note: At least ten experiments should be performed in the semester.

PROGRAMMING IN MATLAB

Subject Code: BELE1-625

L T P C

0 0 2 1

Course Objectives:

1. To introduce to BASIC built in functions of MATLAB and blocks of SIMULINK.
2. To learn to do various programming operations in MATLAB and develop Simulink models in SIMULINK.
4. To learn to plot various types of graphs in MATLAB.

Course Outcomes:

1. Students will know about BASIC built in functions of MATLAB and blocks of SIMULINK.
2. They will learn to do various programming operations in MATLAB and develop Simulink models in SIMULINK.
3. They will be able to draw 2-D and 3-D plots in MATLAB.

EXPERIMENTS

1. Introduction to Fundamentals of MATLAB Programming.
2. To perform Arithmetic and logic operations in MATLAB.
3. To perform branch and loop operations in MATLAB.
4. To use basic built-in function of Matrices in MATLAB.
5. To develop a user defined function file in MATLAB.
6. To plot 2-D & 3-D graphs in MATLAB, such as plots, subplots, logarithmic plots and multiple plots etc.
7. To plot 3-phase AC supply voltage in MATLAB.
8. To develop MATLAB program to calculate ABCD parameters of transmission line.
9. Introduction to commonly used blocks of SIMULINK.
10. To develop Simulink model to show series resonance phenomenon and to plot voltage & current waveforms and frequency vs impedance graph.
11. To develop Simulink model to show parallel resonance phenomenon and plot voltage & current waveforms and frequency vs admittance graph.
12. To develop a Simulink model of symmetrical three phase power system supplying a three phase balanced load and to display the three phase voltage, current, active and reactive power.
13. To develop Simulink model of three phase transformer and to display the primary and secondary voltages and currents.
14. To develop Simulink model for speed control of dc motors.

Note: At least ten experiments should be performed in semester.

Recommended Books

1. Tyagi Agam Kumar, 'Matlab and Simulink for Engineers', Oxford Publishers, 2012.
2. S. Swapna Kumar, S.V.B. Lenina, 'MATLAB Easy Way of Learning', PHI, 2016.
3. Stephen J. Chapman, 'MATLAB Programming for Engineers', Cengage Learning, 2015.

SOFT SKILLS-IV

Subject Code: BHUM0-F94

L T P C

0 0 2 1

Duration: 37 Hrs.

Course Objectives:

The course aims at the key areas like conversation skills, group skills and persuasion skills required during the interview process in an organization.

Course Outcomes:

At the end of the course, the student will be able to:

1. Demonstrate soft skills required for business situations.
2. Analyze the value of soft skills for career enhancement.
3. Apply soft skills to workplace environment.
4. Confidently participate in GD and interview process.

UNIT-1

Art of Speaking: Introduction. Communication process. Importance of communication, channels of communication. Formal and informal communication. Barriers to communication. Tips for effective communication. tips for conversation. Presentation skills. Effective multi-media presentation skills. Speeches and debates. Combating nervousness. Patterns and methods of presentation. Oral presentation, planning and preparation.

UNIT-2

Group Discussion: Introduction. Importance of GD. Characters tested in a GD. Tips on GD. Essential elements of GD. Traits tested in a GD .GD etiquette. Initiating a GD. Non-verbal communication in GD. Movement and gestures to be avoided in a GD. Some topics for GD.

UNIT-3

Preparing Cv/Resume: Introduction – meaning – difference among bio-data, CV and resume. CV writing tips. Do's and don'ts of resume preparation. Vocabulary for resume, common resume mistakes, cover letters, tips for writing cover letters.

UNIT-4

Interview Skills: Introduction. Types of interview. Types of question asked. Reasons for rejections. Post-interview etiquette. Telephonic interview. Dress code at interview. Mistakes during interview. Tips to crack on interview. Contextual questions in interview skills. Emotional crack an interview. Emotional intelligence and critical thinking during interview process.

Recommended Books

ELECTRICAL POWER UTILIZATION

Subject Code: BELE1-660

L T P C
3 0 0 3

Duration: 40 Hrs.

Course Objectives:

1. To acquire knowledge about various elements of A.C and D.C electric motor drives and their characteristics.
2. To acquire detailed knowledge about electric traction systems.
3. To know various phenomena related to electrolytic processes and illumination.

Course Outcomes:

1. Students will get knowledge about D.C and A.C electric motor drive characteristics and select them for particular traction systems.
2. They will be able to explore and control various electric heating and welding methods and processes.
3. They will be able to calculate illumination requirements.

UNIT-I (14 Hrs.)

ELECTRIC DRIVES: Introduction concept of electric drives, classification of electric drives, nature of load, factors effecting selection of drive, Running characteristics of D.C, Series and shunt motor, 3-phase induction motor, 3-phase synchronous motor and A.C series motors. Starting methods of D.C series and shunt motors, starting methods of 3-phase induction motors, examples, starting methods of synchronous motors and single-phase induction motor. Speed control of D.C series and shunt motors, examples, Speed control of 3-phase induction motor, examples, Methods of electric braking of D.C motor, examples. Braking of 3-phase induction motor, Mechanical features of electric drive, Load equalization, flywheel calculations, examples. Temperatures rise of electric drives, heating and cooling curves, standard ratings of motors, examples Applications of electric drives and selection of drives for particular service, conservation approach to be considered.

UNIT-II (10 Hrs.)

Electrical Traction: Introductions, different traction systems, various systems of electric traction. Locomotives, tramways, trolleys, track electrification, comparison between A.C and D.C systems of railway electrification, Types of speed and speed-time curves, examples. Mechanics of train movement, tractive effort, power, output, examples., Energy output from driving axles, energy output using simplified speed-time curves, examples, Factors affecting energy consumption, dead weight, accelerating weight, adhesion weight, examples., Traction motors and their characteristics, starting and speed control of D.C series and shunt motors, examples, Starting and speed control of A.C series and 3-phase induction motors, Braking of traction motors and mechanical considerations, conservation approach to be considered.

UNIT-III (8 Hrs.)

Electrical Heating and Welding: Advantages of electric heating, modes of transfer of heat, classification of electric heating methods, Resistances heating methods, requirements of heating elements, design of heating elements, methods of temperature control, problems, Induction heating: principle, types of induction furnaces, direct core type, vertical core type, indirect core type, core less type, advantages and disadvantages, eddy current heating, applications examples., Arc-furnace: principle, types, direct and indirect arc furnaces, power supply and control, condition for maximum output, examples., Dielectric heating: principles, advantages and disadvantages, applications, choice of frequency, examples., Electric welding: different types of resistance welding and electric arc welding, conservation approach to be considered.

UNIT-IV (8 Hrs.)

Electrolytic Process: Principle, Faradays laws of electrolysis, current efficiency, energy efficiency etc., Rating of metals, production of chemicals, Electro deposition, electroplating, power supply for electrolytic processes.

Illumination: Nature of light, definitions, laws of illumination, different types of lamps, tungsten lamp, discharge lamp, sodium vapour lamp, fluorescent lamp, design of lighting scheme, methods of lighting, calculations, examples, flood lighting, factory lighting and street lighting, examples., conservation approach to be considered.

Recommended Books

5. Tarlok Singh, 'Utilization of Electric Energy', S.K. Kataria and Sons, Katson Books, 2010.

ENERGY AUDITING AND MANAGEMENT

Subject Code: BELE1-661

L T P C
3 0 0 3

Duration: 38 Hrs.

Course Objectives:

1. To understand the importance of energy management and Audit.
2. To study various types of energy dissipating systems such as electrical, compressed air system, HVAC and refrigeration systems.
3. To understand energy audit processes of these systems used in the industry.

Course Outcomes:

1. Students will gain the knowledge about various types of energy dissipating systems.
2. Students will be able to perform the energy audit for various equipment used in daily life.
3. Students will learn the use of various instruments used in energy audit process.

UNIT-I (14 Hrs.)

Energy Scenario: Energy needs of growing economy, Long term energy scenario, Energy pricing, Energy sector reforms, Energy and environment: Air pollution, Climate change, Energy security, Energy conservation and its importance, Energy strategy for the future, Energy conservation Act-2001 and its features.

Energy Management and Audit: Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach-understanding energy costs, Bench marking, Energy performance, matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution, Energy audit instruments

UNIT-II (10 Hrs.)

Material and Energy Balance: Facility as an energy system, Methods for preparing process flow, Material and energy balance diagrams.

Financial Management: Investment-need, Appraisal and criteria, Financial analysis techniques- Simple payback period, Return on investment, Net present value, Internal rate of return, Cash flows, Risk and sensitivity analysis, Financing options, Energy performance contracts and role of ESCOs.

UNIT-III (8 Hrs.)

Electrical System: Electricity tariff, Load management and maximum demand control, Power factor improvement, Distribution and transformer losses. Losses in induction motors, Motor efficiency, Factors affecting motor performance, Rewinding and motor replacement issues, energy efficient motors. Light source, Choice of lighting, Luminance requirements, and Energy conservation avenues

Compressed Air System: Types of air compressors, Compressor efficiency, efficient compressor operation, Compressed air system components, Capacity assessment, Leakage test Factors affecting the performance and efficiency

UNIT-IV (8 Hrs.)

HVAC and Refrigeration System: Vapor compression refrigeration cycle, Refrigerants, Coefficient of performance, Capacity, Factors affecting refrigeration and air conditioning system performance and savings opportunities, Vapor absorption refrigeration system: Working principle, Types and comparison with vapor compression system, Saving potential, Fans, Blowers and pumps- Types, Performance evaluation, efficient system operation, Flow control strategies and energy conservation opportunities.

Recommended Books

SUBSTATION EQUIPMENT AND DESIGN

Subject Code: BELE1-662

L T P C
3 0 0 3

Duration: 38 Hrs.

Course Objectives:

1. To provide knowledge about substation, its layout and main equipment present in it.
2. To impart knowledge about power, current and potential transformer.
3. To understand the importance of reactive power management and the use of capacitor banks in reactive power management.
4. To introduce to elementary design considerations of substation equipment.

Course Outcomes:

1. Students will get familiar with main equipment used in substations and their design considerations.
2. They will be able to know the use of different types of transformers used in substations.
3. They will develop understanding about importance of reactive power and its management by use of capacitor banks.

UNIT-1 (10 Hrs.)

Substation: Introduction, classification and layout of substation, Single Bus bar, Mesh Substation, Factors affecting layout of substation, types of bus bars, Substation equipment specifications, testing of substation Equipment.

Power Transformer: Introduction and Working Principle of Power Transformer, Classification and their types, important characteristics of Transformer Oil.

UNIT-II (8 Hrs.)

Current Transformers (CT): Basic functions of Current Transformer, Rating and Performance of CTs, Burden, Theory and Operation of CT, Diagram of CT's Connection of Power Transformer and Selection of CT.

Potential Transformers (PT): Terminology, requirement of VA Burden, Testing and Commissioning of PTs, Capacitor Voltage Transformer.

Earthing: Introduction and purpose of Earthing, tolerable limits of body currents, soil resistivity, earth resistance and its measurement, tolerable and actual step and touch voltage, types of Earthing, Design of Earthing grid, impulse Behavior of Earthing system, grounded and ungrounded neutral system, Types, Methods and selection of grounding neutral.

UNIT-III (8 Hrs.)

Reactive Power Management: Introduction to Reactive Power & its Importance in Power System, Sources of Generation & Absorption of Reactive Power, Reactive Power Compensation & its Advantages, Various types of Reactive Power Compensation and its Calculation, Static Synchronous Compensator, Unified Power Flow Controller.

Capacitor Banks: - Need for Reactive Compensation, Power Factor Improvement and its Benefits, Purpose of Installation of Capacitor Bank, Protection of Capacitor Bank and Pre-

Commissioning Checks and tests, Series and Shunt Compensators, Rating and operation of Shunt Capacitor banks.

UNIT-IV (12 Hrs.)

Station Battery and Charging Equipment: Introduction, Variable Load Battery and System Tester, Testing of Battery Charger and Battery, Types of Batteries, Basic Charging Methods.

Elementary Idea of Substation Equipment Design: Substation equipment ratings and its operation from design view point, selection of cables, Isolator Design, Overhead line terminations, bus bar size calculations and panel design, design of Surge Arrestor, selection of power transformer.

Computer Applications in Substation Engineering: Introduction, System Components, Communication Infrastructure and Methods, Trends in SCADA, Remote Terminal Unit, MODEM.

Recommended Books:

1. R.S. Dahiya and Vinay Attri, 'Sub Station Engineering, Design, Concepts and Computer Application', S.K. Kataria & Sons, **2013**.
2. S. Rao, 'Electrical Substation Engineering and Practice', Khanna Publishers, **1992**.
3. P.S. Satnam and P.V. Gupta, 'Substation Design and Equipment', Dhanpat Rai Publications, **2013**.
4. McDonald John D., 'Electric Power Substations Engineering', 3rd Edn., CRC Press, **2012**.

DIGITAL CONTROL SYSTEMS

Subject Code: BELE1-663

L T P C
3 0 0 3

Duration: 38 Hrs.

Course Objectives:

1. To introduce to discrete data control systems, digital signals, sample and hold circuits etc.
2. To study transfer functions and application of z-transforms.
3. To study time response, frequency response and state space techniques of continuous data and discrete data digital control signals.

Course Outcomes:

1. The students will get knowledge about the basics of digital control systems.
2. They will be able to find out the time response and frequency response of these systems
3. They will get skilled to design digital control systems with digital controllers.

UNIT-I (10 Hrs.)

Introduction: Basic Elements of discrete data control systems, advantages of discrete data control systems, examples.

Signal conversion and processing: Digital signals and coding, data conversion and quantization, sample and hold devices, Mathematical modeling of the sampling process; Data reconstruction and filtering of sampled signals: Zero order hold, first order Hold and polygonal hold.

UNIT-II (10 Hrs.)

Review of z-Transforms, Applications of z-Transforms to Difference equations, Modified z-Transforms, transfer functions, Block diagrams, signal flow graphs: Introduction, Pulse Transfer function, and z-Transfer function, Discrete Data System with cascaded elements separated by a sampler and not separated by a sampler. Closed loop systems, characteristic equation in discrete domain, causality and physically realizable systems; The Sampled signal flow graph.

UNIT-III (10 Hrs.)

Time response: Comparison of continuous data and discrete data, Steady state error analysis of digital control systems, correlation between time response and root locations in s-plane and z-plane, Root loci for digital control systems, Effects of adding poles and zeros to open loop transfer function, discrete data systems: Stability tests of discrete data systems: Bilinear transformation method, extension of RH criterion, Jury's Stability Test.

Frequency – Domain Analysis: Polar plot of GH (z), Nyquist stability criterion, Bode plot, Gain Margin and Phase margin, Nicholas chart, Band width considerations, sensitivity analysis.

Unit-IV (8 Hrs.)

State Space Techniques: Review of continuous data systems, state equations of discrete data systems with sample and hold devices, state diagrams of digital systems, Decomposition of discrete data transfer function, state variable analysis of response between sampling instants, Controllability, Observability of LTI discrete data systems. Design of digital control systems with digital controllers through bilinear transformation. Digital PID controller, Design for dead-beat response, pole placement design by incomplete feedback or output feedback.

ENERGY EFFICIENT MACHINES

Subject Code: BELE1-664

**L T P C
3 0 0 3**

Duration: 40 Hrs.

Course Objectives:

1. To make the students aware about the basics and need for energy efficient machines.
2. To make them familiar with the energy efficient motors and their applications.
3. To make them to understand the underlying aspects of economics of energy efficient systems.

Course Outcomes:

1. The students will become aware about the need for energy efficient machines.
2. They will come to know about the energy efficient motors and their applications.
3. They will understand the underlying aspects of economics of energy efficient systems.

UNIT-I (8 Hrs.)

Introduction: Need for energy efficient machines, energy cost and two-part tariff, energy conservation in industries and farms -a necessity, introduction to energy management and energy audit system.

UNIT-II (12 Hrs.)

Energy Efficient motors: Review of induction motor characteristics, Standard motor efficiency, energy efficient motor, efficiency determination methods, Direct Measurement method, Loss segregation method, Comparison, motor efficiency labeling, energy efficient motor standards.

Power Factor: The power factor in sinusoidal systems, power factor improvement, power factor with nonlinear loads, Harmonics and power factor.

UNIT-III (10 Hrs.)

Application of Electric motors: Varying duty applications, Voltage variation, Voltage Unbalance, over motoring, Poly-phase induction motors supplied by adjustable frequency power supplies.

UNIT-IV (10 Hrs.)

Induction motors and adjustable drive Systems: Energy Conservation, adjustable speed systems, Application of adjustable speed systems to fans, pumps and constant torque loads.

Economics of Energy Efficient Systems: Motor life cycle, Direct Savings and pay back analysis, efficiency evaluation factor, present worth method with constant power costs, present worth method with increasing power costs, net present worth method.

Recommended Books

VIRTUAL INSTRUMENTATION

Subject Code: BELE1-665

L T P C

Duration: 38 Hrs.

3 0 0 3

Course Objectives:

1. To understand Virtual instrumentation and to realize the architecture of VI.
2. To familiarize with the VI software and learn programming in VI.
3. To study various instruments, interfacing and data acquisition methods.

Course Outcomes:

1. The students will be having skills of programming techniques.
2. They will be able to do data acquisition by creating Virtual Instruments for practical works.
3. Students will gain knowledge of analysis tools.

Unit - I (10 Hrs.)

Review of Virtual Instrumentation: Historical perspective, Advantages of virtual instrumentation system, Block diagram and architecture of a virtual Instrument, examples.

Data-flow Techniques: Graphical programming in data flow, Front Panel, Block Diagram, Comparison with conventional programming, Instructions.

VI Programming Techniques: VIs and sub-VIs, Loops and charts, Arrays, Clusters and graphs, Case and sequence structures, Formula nodes, Local and global variables, String and file I/O.

Unit -II (10 Hrs.)

Data Acquisition: Data acquisition boards, A/D Convertors, D/A Convertors, Digital Input and Output, Counters and timers, PC Hardware' structure, Timing, Interrupts, DMA Software and hardware installation.

Common Instrumentation Interfaces: Serial ports: RS-232, USB, Parallel ports: IEEE-1284, GPIB standard IEEE-488.2.

Unit -III (10 Hrs.)

Analysis Tools: Fourier transforms, Power spectrum, Correlation methods, Windowing and filtering, VI Applications in various fields.

Advanced Interface Buses: System buses, USB, PCMCIA, PCI, VXI, SCXI, PXI, Networking basics for office and industrial applications, VISA and IVI, interfere tools for Image acquisition and processing, Motion Control.

Unit -IV (8 Hrs.)

Laboratory Work: Components of Lab VIEW, Celsius to Fahrenheit conversion, Debugging, Sub-VI, Multi-plot charts, Case structures, ASCII files, Function Generator, Waveform generation, use of Property Node, Formula node, shift registers, Array, Strings, Clusters, DC voltage measurement using DAQ, Application of Data Acquisition system for measurement of temperature, pressure, Electrical quantities.

FLEXIBLE AC TRANSMISSION SYSTEM

Subject Code: BELE1-666

L T P C
3 0 0 3

Duration: 40 Hrs.

Learning Objectives:

1. To review the power electronics fundamentals.
2. To review power transmission fundamentals and to introduce the FACTS concept.
3. To introduce to the need of shunt and series compensation and UPFC.

Course Outcomes:

1. Students will refresh the power converters' fundamentals.
2. They will learn about need and applications of FACTS controllers.
3. They would develop understanding about shunt and series compensation and UPFC.

UNIT-I (10 Hrs.)

Power Electronics fundamentals: Basic function of power electronics, Power semiconductor device for high power converters, Static power converter structures, AC controller based structure, DC link converter topologies, Converter output and harmonic control.

UNIT-II (10 Hrs.)

Power Transmission control: Fundamental of ac power transmission, Transmission problems and needs, the emergence of FACTS, FACTS control considerations, FACTS controllers.

UNIT-III (10 Hrs.)

Shunt and Series Compensation: Shunt SVC principles, Configuration and control, STATCOM, Configuration applications. Fundamental of series compensation using GCSC, TCSC and TSSC, Application of TCSC for different problems of power system, TCSC layout, SSSC principle of operation.

UNIT-IV (10 Hrs.)

Unified Power Flow Controllers: Basic operating principles and characteristics, independent active and reactive power flow control, control of UPFC, installation, applications, UPFC model for power flow studies, comparison of UPFC with the controlled series compensators and phase shifters.

Recommended Books

NON-CONVENTIONAL ENERGY SOURCES

Subject Code: BELE1-667

L T P C
3 0 0 3

Duration: 40 Hrs.

Course Objectives:

1. To obtain knowledge about renewable energy sources and solar energy and their utilization.
2. To introduce to wind energy conversion and bio-mass energy conversion systems.
3. To introduce to geothermal energy and energy from ocean. To make them aware about hydrogen energy sources.

Course Outcomes:

1. Students will get knowledge about utilization of renewable energy sources and solar energy.
2. They will learn about wind energy conversion and bio-mass energy conversion systems.
3. They will become aware about geothermal energy, energy from ocean and hydrogen energy sources.

UNIT-I (12 Hrs.)

Solar Energy: Conventional energy sources and availability, Introduction to new energy techniques & renewable energy sources; Solar Energy, Solar constant, Radiation geometry, Solar energy collectors, Concentrated and flat plate, Energy balance and collector efficiency, Solar energy storage, Application to space heating, distillation, cooking and greenhouse effect.

UNIT-II (12 Hrs.)

Wind Energy: Basic principle of wind energy conversion, site selection, analysis of aerodynamic forces acting on wind mill blades and estimation of power output.

Bio-energy: Biomass conversion technology, photosynthesis, biogas plant, thermal gasification.

UNIT-III (8 Hrs.)

Geothermal Energy: Sources- hydrothermal, hot dry rock, geothermal fossil system, prime movers for geothermal energy.

Energy from Ocean: Ocean thermal electric conversion, energy from tides, small-scale hydroelectric development.

UNIT-IV (8 Hrs.)

Hydrogen Energy Sources: Introduction, hydrogen production methods, storage, utilization, magneto hydrodynamic power, thermionic generation, nuclear fusion energy.
