

Specifications for Probe – station

The probe station system is required for the precise positioning of thin needles/microprobes on the surface of sample to acquire the signals.

Specifications:

1. Stage size: 4" x 4"
2. XY translation of platen via fine control movement.
3. PID controlled temperature stage up to 200 Deg. C.
4. Material: Nickel plated steel.
5. Resolution: 10 microns
6. Digital display with Digital Microscopic Camera.
7. Adjustable LED on – board illuminator.
8. Micro Vacuum Pump.
9. A pair of special gold – plated thin needles/microprobes suitable for micron level contacts.
10. Tri – axial probe holders.
11. Suitable for two probe and four probe station.
12. After sales support and services is required.
